

Create a blog-page from design provided.

Create a simple form to submit blog content and display on the front end.

Requirements

1. Make it responsive (breakpoints: 400px and 1240px) without using any HTML/CSS libraries & frameworks.
2. Form should have validations
3. Preferably use plain vanilla JS or if you are more comfortable with jQuery then that would do as well.

Submission

1. Create a public GitHub repo with your code (including a GitHub Pages branch - optional) to host your app.
2. Kindly provide instructions to open/view project. (if needed)

Evaluation

1. Code quality, brevity, readability, maintainability, coding standards.
2. (Development) Time taken.
3. UI quality.
